

## **Are Your Properties in the MLS not being Mapped?**

If you've ever entered a property in the MLS only to discover that it's not being mapped, there is a solution.

The reason properties don't get mapped properly or at all is because they are missing the geocoding information. These are the latitude and longitude coordinates.

This information can usually be obtained by going to a site on the internet (such as <http://geocoder.us/> or <http://www.travelgis.com/geocode/default.aspx>) and entering the property address.

Once the site has determined the latitude and longitude coordinates, send them to your MLS Provider Association along with the MLS # of the property not being mapped and they will have NTREIS Staff geocode the property manually.
