

How to Search for Corresponding Map Page in another Map Book

Users can now get search results from a page in one Map book that is a corresponding page in another Map book.

For example, the Dallas Mapsco book (DA) page 0002 is also the same as the Denton Cook (DC) Mapsco book page 0134.

Users can only take advantage of this new functionality by using the “Advanced Map/Map Book Search” on the Quick Search screen. It will not work if you enter the information manually.

Once a user has selected a Map book and page, if it also corresponds with a page in another Map book, the search results will include properties from both book pages. Please note that map coordinates are ignored in this instance.

Although there are many pages in various Mapsco books that are also found in another Mapsco book, it does not affect all pages.
